

The GERB Group is a renowned manufacturer of innovative Vibration Control Systems with an over 100 year-long company tradition based in Germany. GERB is market leader in several countries and industry segments and has gained a very good reputation on many international markets, representing state-of-the-art engineering, innovation and profound expertise. GERB employs almost 600 people in 11 subsidiaries and production sites worldwide and is continuously advancing its technology and developing new markets. In some areas GERB works with local representatives to promote its products and services. In Korea GERB is working with a well-developed local trading company which has supported the GERB brand in Korea for more than 20 years.

GERB is specialized in solving vibration problems in a wide range of applications, developing elastic support systems for the active vibration isolation of many metal forming machines and for power plant equipment, to optimize, for instance, foundation layout and construction cost. In passive isolation sensitive equipment and even entire buildings are protected against vibration caused by traffic or nearby machinery. Tuned mass dampers are a special way of vibration control against wind, earthquake, machine or traffic excitation of bridges and buildings. It is also our ambition to find innovative solutions for earthquake protection of structures in seismic prone countries. GERB mass-spring systems provide a vibration controlling interface between rail trackbeds and nearby buildings.

To expand our activities into new areas and to deepen the technical expertise in the Korean market we are looking for a

Sales Manager Korea

As Sales Manager Korea you will initially be associated with our current representative and provide technical expertise to manage current as well as future projects including the design of customized technical solutions up to the supervision of the project implementation. The training for this job would take place at our headquarters in Berlin/Germany. The permanent job location will be in Seoul.

As an ideal candidate you

- hold a degree in Structural Engineering or Mechanical Engineering with, ideally, knowledge in the field of structural or mechanical vibrations
- have gained several years' experience in technical sales
- have gained experience in the acquisition of new customers
- are fluent in Korean and in English
- are ready to travel on a regular basis

Furthermore, you should

- display a hands-on attitude
- possess good communication skills
- keep a high level of personal engagement
- be reliable and loyal
- have experience in corporation with West European enterprises
- be interested in a long term employment
